

Healthy water, healthy life.

Counter-top drinking water filters

Situated on the kitchen counter next to the sink, counter-top filters are popular with people who require very easy access to their water filter system.

Designed to fit most common threaded mixer taps via a diverter valve. In one position the diverter valve sends water through the filter unit and filtered water is dispensed from the spout on the filter unit. In the other position the diverter valve sends unfiltered water to run directly through the kitchen tap as normal.

Counter-top filters are extremely easy to install and uninstall, providing the ideal solution for people who move home on a regular basis.

- Up to 300 litres per hour of refreshingly clean drinking water on tap.
- Easy to install and use. Simple to maintain. Wholly reliable.
- No power required. Protecting you whether or not power is available.
- Fitted with long life, cleanable, ceramic filters giving you extra value.

Healthy water, healthy life.

Technology you can trust

- Counter-top water filters are for use on all pressurised water supplies up to a maximum pressure of 100 psi.
- Should be fitted with any 10 inch x 2 inch diameter Doulton® short mount filter candle.
- The choice of filter candle grade depends on which contaminants you want to remove from your water.
